

Legendijk Construction has recently started procedures to meet ISO 9001:2008 and VGWM requirements around early 2012.

Both standards will form a quality assurance for design, crane manufacture, offshore constructions, dredging equipment specialist services, safe working, well being, occupational health and environmental aspects.

This certification recognizes the company's commitment to service provision, equipment quality, continuous improvement of its management systems, and above all customer satisfaction.

Achieving ISO 9001:2008 and VGWM certification not only reflects our ongoing commitment to operational excellence and process management, it also underlines our goal to provide customers with the highest quality products and services at all times.
